

UVC SHOE SANITIZER

This is an effective use of UV technology that reduces the organisms that cause HAIs (Healthcare Associated Infections). It lowers the risk of cross contamination and does not add labor costs. Infection control and prevention programs have been started with systems that cannot provide an effective line of defense against HAI's. UV shoe sanitizer is the first hands and chemical free infection control product that works 24/7 and kills up to 99% of exposed organisms on the soles of shoes in just 5 to 8 seconds. UV germicidal light kills organism at DNA level, by inactivating the DNA in microorganisms.

FEATURES

- R SENSOR used for each use
- Shatter resistant
- Power Rating: 40W
- Self Cleaning
- Kills up to 99% of UVC exposed germs and pathogens
- Disinfects without gels or chemicals
- In-built Timer to provide 10 second disinfection time
- Hands free
- Automatic ON / OFF within 10 SEC
- Stainless steel (SS) construction
- Countdown disinfection timer with compliance usage counter
- UL listed components used in the design
- Foldable for better packaging dimension
- LED life 30000 Hr
- Weight: 11 Kg

UV RADIATION IS HAZARDOUS Protect eyes and skin from exposure to UV light. Use only with shielding in place
